You've got a great start on your ER diagram! Here's how we can refine and enhance it to produce an even clearer picture.

Understanding the Model: A Step-by-Step Breakdown

- Entity Definitions:** The diagram provides clear definitions for each entity in the database (e.g., Student, Professor, Class).
- Attribute Representation:** Each entity has attributes that define its unique characteristics, such as `STU_NUM` for a student's ID and `CRS_TITLE` for a course name.
- Relationships:** You've done a good job describing relationships between entities (e.g., students enroll in classes).
