

PROMPT

I need a Mermaid ER diagram for a university database. Here are all the tables and what fields they should have:

STUDENT: STU_NUM (PK), STU_LNAME, STU_FNAME, STU_INITIAL, STU_EMAIL, DEPT_CODE (FK), PROF_NUM (FK)

PROFESSOR: PROF_NUM (PK), PROF_LNAME, PROF_FNAME, PROF_INITIAL, PROF_EMAIL, PROF_SPECIALTY, PROF_RANK, DEPT_CODE (FK)

COURSE: CRS_CODE (PK), CRS_TITLE, CRS_DESCRIPTION, CRS_CREDIT, DEPT_CODE (FK)

CLASS: CLASS_CODE (PK), CLASS_SECTION, CLASS_TIME, CRS_CODE (FK), PROF_NUM (FK), ROOM_CODE (FK)

ENROLL: STU_NUM (FK), CLASS_CODE (FK), ENROLL_DATE, ENROLL_GRADE

SCHOOL: SCHOOL_CODE (PK), SCHOOL_NAME, PROF_NUM (FK)

DEPARTMENT: DEPT_CODE (PK), DEPT_NAME, SCHOOL_CODE (FK), PROF_NUM (FK)

ROOM: ROOM_CODE (PK), ROOM_TYPE, BLDG_CODE (FK)

BUILDING: BLDG_CODE (PK), BLDG_NAME, BLDG_LOCATION

STUDENT_CLUB: CLUB_ID (PK), CLUB_NAME, CLUB_TYPE, ADVISOR_PROF (FK), MEETING_ROOM (FK), FOUNDING_YEAR

LIBRARY: LIB_CODE (PK), LIB_NAME, BLDG_CODE (FK), OPEN_HOURS, NUM_SEATS, LIB_MANAGER

BOOK: BOOK_ISBN (PK), TITLE, AUTHOR, PUB_YEAR, GENRE, LIB_CODE (FK)

EVENT: EVENT_ID (PK), EVENT_NAME, EVENT_DATE, EVENT_TIME, ROOM_CODE (FK), ORGANIZER (FK)

GYM: GYM_ID (PK), GYM_NAME, BLDG_CODE (FK), OPEN_HOURS, NUM_EQUIPMENT, MANAGER_NAME

BORROWS: STU_NUM (FK), BOOK_ISBN (FK), BORROW_DATE, RETURN_DATE

Here's how the tables are related:

A professor can be a dean of a school.

A school has multiple departments.

A department employs professors and offers courses.

Courses generate classes.

Professors teach classes.

Classes are held in rooms, and rooms are in buildings.

Students enroll in classes.

Students belong to a department.

Professors advise students.

Students can be members of student clubs, which have a faculty advisor and meet in a room.

School has a library.

Libraries have books and are located in buildings.

Students can borrow books.

Events are held in rooms, and are organized by student clubs and attended by students.

Gyms are in buildings, and students can use gyms.

Please generate a full Mermaid ER diagram code with these tables, attributes, and relationships. Make it nicely formatted.
